# RUBISCO

# What is ILAMB?

A community coordination activity created to:

- **Develop internationally accepted benchmarks** for land model performance by drawing upon collaborative expertise
- **Promote the use of these benchmarks** for model intercomparison
- **Strengthen linkages between experimental, remote sensing, and Earth system modeling communities** in the design of new model tests and new measurement programs
- **Support the design and development of open source benchmarking tools** (Luo et al., 2012)

*Energy and Water Cycles*

*Carbon and Biogeochemical Cycles*

# What is a Benchmark?

- A **benchmark** is a quantitative test of model function achieved through comparison of model results with observational data
- Acceptable performance on a benchmark **is a necessary but not sufficient condition** for a fully functioning model
- **Functional benchmarks** offer tests of model responses to forcings and yield insights into ecosystem processes
- Effective benchmarks must draw upon **a broad set of independent observations** to evaluate model performance at multiple scales

*Models often fail to capture the amplitude of the seasonal cycle of atmospheric CO<sub>2</sub>*

*Models may reproduce correct responses over only a limited range of forcing variables*

(Randerson et al., 2009)

- **First ILAMB Workshop** was held in Exeter, UK, on June 22–24, 2009
- **Second ILAMB Workshop** was held in Irvine, CA, USA, on January 24–26, 2011
  - ~45 researchers participated from the US, Canada, UK, Netherlands, France, Germany, Switzerland, China, Japan, and Australia
  - Developed methodology for model-data comparison and baseline standard for performance of land model process representations (Luo et al., 2012)

## 2016 International Land Model Benchmarking (ILAMB) Workshop May 16–18, 2016, Washington, DC

**Third ILAMB Workshop** was held May 16–18, 2016

- Workshop Goals
  - Design of new metrics for model benchmarking
  - Model Intercomparison Project (MIP) evaluation needs
  - Model development, testbeds, and workflow processes
  - Observational data sets and needed measurements
- Workshop Attendance
  - 60+ participants from Australia, Japan, China, Germany, Sweden, Netherlands, UK, and US (10 modeling centers)
  - ~25 remote attendees at any time

# Development of ILAMB Packages

- **ILAMBv1** released at 2015 AGU Fall Meeting Town Hall, doi:[10.18139/ILAMB.v001.00/1251597](https://doi.org/10.18139/ILAMB.v001.00/1251597)
- **ILAMBv2** released at 2016 ILAMB Workshop, doi:[10.18139/ILAMB.v002.00/1251621](https://doi.org/10.18139/ILAMB.v002.00/1251621)
- Open Source software freely distributed
- Routinely used for E3SM and CESM evaluation during development
- Employed to evaluate CMIP5 models
- Models are scored based on statistical comparisons (bias, RMS error, phase, amplitude, spatial distribution, Taylor scores) and functional response metrics

# ILAMBv2 Package Current Variables

- **Biogeochemistry:** Aboveground live biomass (Contiguous US, Pan Tropical Forest), Burned area (GFED3), CO<sub>2</sub> (NOAA GMD, Mauna Loa), Gross primary production (Fluxnet, MTE), Leaf area index (AVHRR, MODIS), Global net land flux (GCP, Khatiwala/Hoffman), Net ecosystem exchange (Fluxnet, GBA), Ecosystem Respiration (Fluxnet, GBA), Soil C (HWSD, NCSCDv2)
- **Hydrology:** Evapotranspiration (GLEAM, MODIS), Latent heat (Fluxnet, MTE), Soil moisture (ESA), Terrestrial water storage anomaly (GRACE)
- **Energy:** Albedo (CERES, GEWEX, MODIS), Surface up SW/LW radiation (CERES, GEWEX.SRB, WRMC.BSRN), Sensible heat (Fluxnet, GBA)
- **Forcing:** Surface air temperature (CRU, Fluxnet), Precipitation (Fluxnet, GPCC, GPCP2), Surface down SW/LW radiation (Fluxnet, CERES, GEWEX.SRB, WRMC.BSRN)

# ILAMB Assessing Several Generations of CLM

- Improvements in mechanistic treatment of hydrology, ecology, and land use with many more moving parts
- Simulation improved even with enhanced complexity
- Observational datasets not always self-consistent
- Forcing uncertainty confounds assessment of model development (not shown)

(Lawrence et al., in revision)

ANNUAL CYCLE

# CMIP5 vs. CMIP6 Models

- The CMIP6 suite of land models (right) has improved over the CMIP5 suite of land models (left)
- The multi-model mean outperforms any single model for each suite of models
- The multi-model mean CMIP6 land model is the “best” model overall

(Hoffman et al., in prep)

# Predictive Ecosystem Analyzer (PEcAn)

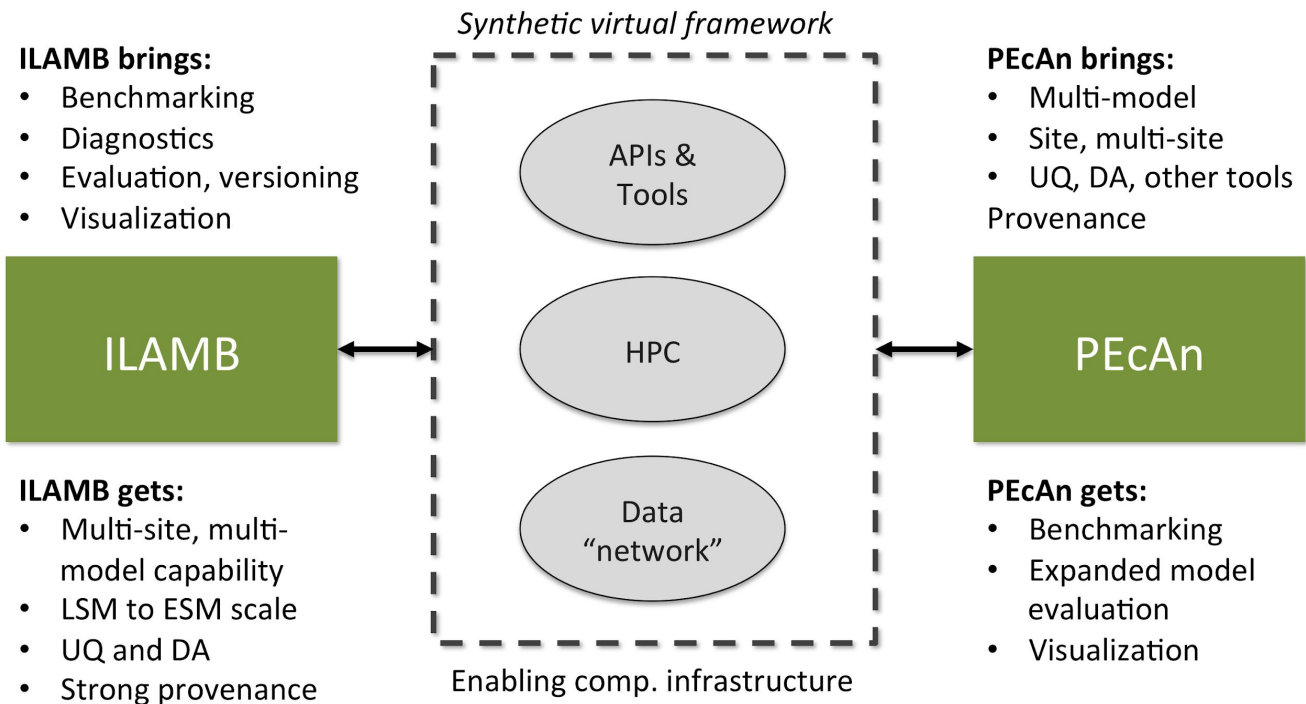

**Standardized** inputs and outputs

**Provenance:** transparent & repeatable

**Accessible** interface

**Reusable tools** for execution, analysis, visualization

# ILAMB + PEcAn Synergy

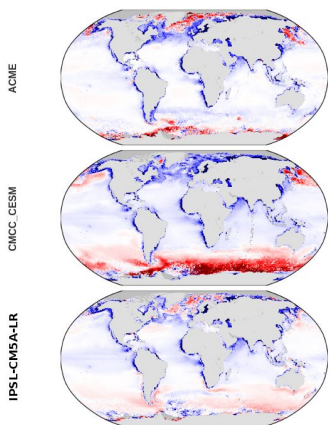

*See section E.4 in ILAMB report for more info*

# International Ocean Model Benchmarking (IOMB) Package

- Evaluates ocean biogeochemistry results compared with observations (global, point, ship tracks)
- Scores model performance across a wide range of independent benchmark data
- Leverages ILAMB code base, also runs in parallel
- Built on python and open standards
- Is also open source and will be released soon

### Bias

### Spatial Distribution

### Annual & Seasonal Cycles

# Future ILAMB/IOMB Development and Application

- ILAMBV1 and ILAMBV2 were applied to:
  - CMIP5 Historical and esmHistorical simulations
  - Model verification during development of the ELM and CLM
- Within U.S. Department of Energy projects:
  - NGEE Arctic, NGEE Tropics, and SPRUCE contributing field data and metrics
  - E3SM using it to evaluate new land and ocean model features
- Ongoing model intercomparison projects: TRENDY, MsTMIP, and CMIP6
- Other groups are using and contributing to ILAMB:
  - NASA-funded Permafrost Benchmarking System
  - Community Surface Dynamics Modeling System (CSDMS) added into web modeling system
  - In-house model evaluation at various international modeling centers

Collier, Nathan, Forrest M. Hoffman, David M. Lawrence, Gretchen Keppel-Aleks, Charles D. Koven, William J. Riley, Mingquan Mu, and James T. Randerson (2018), The International Land Model Benchmarking (ILAMB) System: Design, Theory, and Implementation, *J. Adv. Model. Earth Syst.*, 10(11):2731–2754, doi:[10.1029/2018MS001354](https://doi.org/10.1029/2018MS001354).

## **Model Benchmarking and ILAMB Tutorial**

*(Listed as **TES Breakout D: ILAMB Soil C Demonstration and Tutorial on the Agenda**)*

**Tuesday night** at 7:00 p.m. – 8:30 p.m.

In Franklin Building 18/19

- Formed after community recommendation from the 2016 International Land Model Benchmarking (ILAMB) Workshop Report
- Objective is to apply data and models to improve predictive understanding
- June and September conference calls led to meeting at ORNL in October

## Data to Knowledge

Synthesize existing data from collaborative networks, archives, and publications

## Knowledge to Data

Perform simulations to test hypotheses and characterize model structural uncertainties

## Predictive Understanding

Design functional relationship metrics to confront models and apply data-driven approaches to model formulation

## Global Data Synthesis Theme

- Combine field observations from collaborative sampling networks and databases, including International Soil Carbon Network (ISCN) and published literature
- Quantify vertical distribution of SOM and responses to controlling mechanisms

## Model-Data Integration Theme

- Develop consistent datasets for initializing, forcing, and benchmarking microbially explicit soil carbon models
- Characterize model structural uncertainty through software frameworks to understand controlling mechanisms

For more information, contact Forrest M. Hoffman <[forrest@climatemodeling.org](mailto:forrest@climatemodeling.org)> or Umakant Mishra <[umishra@anl.gov](mailto:umishra@anl.gov)>

# Soil Carbon Dynamics Working Group Discussion

*(Listed as the **ILAMB BGC Meeting** on the Agenda)*

**Tonight** at 6:30 p.m. – 7:30 p.m.

In Franklin Building 15/16
